

Business Continuity Strategies

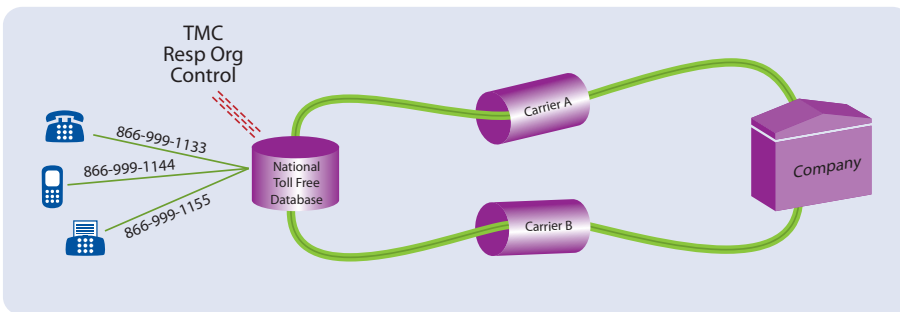

TMC's multi-carrier solution keeps your business running

If calling is critical to your business – and for most, it is – you need a business continuity strategy. TMC's unique multi-carrier solution allows your business to continue running without interruption, even through carrier outages and natural disasters. Downtime is reduced and service interruptions are minimized. Plus, you save money by sending your calls on the least-cost route.

TMC's multi-carrier solution

Two dedicated lines are included in your network design and you select the two carriers you prefer. TMC loads your 800 numbers and routing and traffic allocation into the carrier's switch and stores this information in the national toll-free database. If a carrier goes down, TMC, as the Responsible Organization (RespOrg), will immediately access the database and switch the traffic to the alternative carrier in just minutes. This strategy redirects both inbound calls and outbound calls. Including two carriers in your network also gives you the ability to route your calls through the least-cost carrier. Traffic is allocated to the least-cost carrier based on your calling patterns.

TMC employed this solution for an Internet company. They saved 25% on their next bill, and with two dedicated lines they had the added security of network redundancy.

Telecom Made Simple

Fully Integrated Solution

TMC provides a full range of voice, data and enhanced services designed to meet the requirements of business customers. And you receive one invoice, one point of contact and one phone number to call for all your telecommunication services.

Consultation from Industry Experts
